

**Official Breed Standard
of the
Kennel Union of South Africa**

WEST HIGHLAND WHITE TERRIER

GENERAL APPEARANCE

Strong built; deep in chest and back ribs; level back and powerful quarters on muscular legs and exhibiting in a marked degree a great combination of strength and activity.

CHARACTERISTICS

Small, active, game, hardy, possessed of no small amount of self-esteem with a varminty appearance.

TEMPERAMENT

Alert, gay, courageous, self-reliant but friendly.

HEAD & SKULL

Skull slightly domed; when handled across forehead presents a smooth contour. Tapering very slightly from skull at level of ears to eyes. Distance from occiput to eyes slightly greater than length of foreface. Head thickly coated with hair, and carried at right angle or less, to axis of neck. Head not to be carried in extended position. Foreface gradually tapering from eye to muzzle. Distinct stop formed by heavy, bony ridges immediately above and slightly overhanging eye, and slight indentation between eyes. Foreface not dished nor falling away quickly below eyes, where it is well made up. Jaws strong and level. Nose black and fairly large, forming smooth contour with rest of muzzle. Nose not projecting forward.

EYES

Set wide apart, medium in size, not full, as dark as possible. Slightly sunk in head, sharp and intelligent, which, looking from under heavy eyebrows, impart a piercing look. Light coloured eyes highly undesirable.

EARS

Small, erect and carried firmly, terminating in sharp point, set neither too wide nor too close. Hair short and smooth (velvety), should not be cut. Free from any fringe at top. Round-pointed, broad, large or thick ears or too heavily coated with hair most undesirable.

MOUTH

As broad between canine teeth as is consistent with varminty expression required. Teeth large for large size of dog, with regular scissor bite, i.e. upper teeth closely overlapping lower teeth and set square to the jaws.

NECK

Sufficiently long to allow proper set on of head required, muscular and gradually thickening towards base allowing neck to merge into nicely sloping shoulders.

FOREQUARTERS

Shoulders sloping backwards. Shoulder blades broad and lying close to chest wall. Shoulder joint placed forward, elbows well in, allowing foreleg to move freely, parallel to axis of body. Forelegs short and muscular, straight and thickly covered with short, hard hair.

BODY

Compact. Back level, loins broad and strong. Chest deep and ribs well arched in upper half presenting a flattish side appearance. Back ribs of considerable depth and distance from last rib of quarters as short as compatible with free movement of body.

HINDQUARTERS

Strong, muscular and wide across top. Legs short, muscular and sinewy. Thighs very muscular and not too wide apart. Hocks bent and well set in under body so as to be fairly close to each other when standing or moving. Straight or weak hocks most undesirable.

FEET

Forefeet larger than hind, round, proportionate in size, strong, thickly padded and covered with short harsh hair. Hindfeet are smaller and thickly padded. Under surface of pads and all nails preferably black.

TAIL

13 - 15 cms (5 - 6 ins) long, covered with harsh hair, no feathering, as straight as possible, carried jauntily, not gay or carried over back. A long tail undesirable, and on no account should tails be docked.

GAIT / MOVEMENT

Free, straight and easy all round. In front, legs freely extended forward from shoulder. Hind movement free, strong and close. Stifle and hocks well flexed and hocks drawn under body giving drive. Stiff, stilted movement behind and cowhocks highly undesirable.

COAT

Double coated. Outer coat consists of harsh hair, about 5 cms (2 ins) long, free from any curl. Undercoat,

which resembles fur, short, soft and close. Open coats most undesirable.

COLOUR

White.

SIZE

Height at withers approximately 28 cms (11 ins).

FAULTS

Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree and its effect on health & welfare of the dog

NOTE

Male animals should have two apparently normal testicles fully descended into the scrotum.
